

BioMed turned a persisted workplace issue into measured improvement

Metalmark helped deliver and verify changes in an office environment affected by persistent odor and microorganism concerns that conventional approaches had not solved

BEFORE

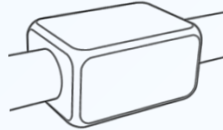

Persistent odor and air quality concerns

BASELINE

DURING OPERATION

Targeted intervention in the workspace

OPERATION

AFTER

Measurable improvement and better air quality

POST-OPERATION

MEASURED RESULTS

Up to **38%**

reduction in airborne bacteria

Up to **67%**

reduction in non-ideal PM2.5 levels

Up to **29%**

reduction in TVOCs

Why it mattered

The company needed a way to address a persistent workplace environmental concern that employees could perceive and HVAC upgrades had not resolved

What this made possible

A targeted intervention backed by baseline comparison and employee-confirmed improvement

“We had an immediate change in our office air quality when the machine came in and an immediate change as soon as it left.”
